FEATURED TECHNICAL PROJECTS

JARVIS — Autonomous Multimodal AI Desktop Assistant

React 19 · Electron · TypeScript · Gemini Live API · Python

Autonomous voice & vision desktop assistant powered by Gemini Live WebSocket API

- Architected an autonomous AI desktop assistant using **React 19, TypeScript, Electron, and Tailwind CSS**, featuring low-latency bidirectional voice interaction with natural Hinglish/English support.
- Integrated **Gemini Multimodal Live API** via WebSockets for real-time streaming audio and engineered **Screen Vision Sentinel** for live screen capture analysis and contextual assistance.
- Developed **System Control & Memory engines** using Python and Electron IPC to execute desktop commands, app automation, and persistent multi-session memory.

AI Viral SEO & Trend Agent — YouTube Shorts Engine

Python · Flask · Multimodal AI · Web Scraping · REST API

Automated content intelligence pipeline analyzing media & real-time trends for maximum reach

- Built an automated content intelligence engine that ingests video/image assets, extracts visual context, and cross-references them with real-time scraped social trends.
- Integrated **Multimodal Vision & LLM APIs** to automatically generate high-retention video hooks, viral titles, optimized descriptions, and relevant hashtag clusters.
- Engineered a modular **Flask REST backend** featuring asynchronous processing, dynamic tone/language customization (Hinglish/English), and automated metadata pipelines.
